2 MOUNTING

2.1 EXTENSION WITHOUT FEELER WHEELS

Figure 1

Figure 2

- Unfold the AS 600 M1 (Figure 1).
- Remove the pivoting limiters on the outer tine sections (Figure 2).

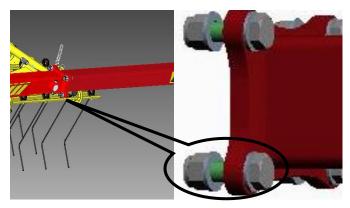

Figure 3

 Install the flange frame on the existing frame with the M16x55 hexagonal bolts and the M16 nuts and one M16 washer each (Figure 3).

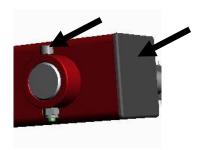

Figure 4

- Install the 45x300 pin in the flange frame and fasten it with a M10x80 cylinder screw and the M10 lock nut (Figure 4).
- Install the 100x100 plastic plug on the end of the flange frame (Figure 4).

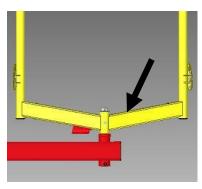

Figure 5

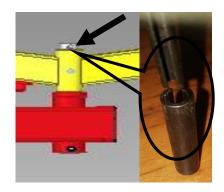

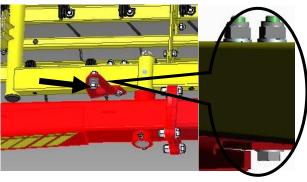

Figure 6

- Install the tine section fork on the flange frame (Figure 5).
- Install one spacer disc 51-35.5-4 and secure it initially with a 10x65 dowel pin, with the slit facing opposite to the direction of travel. Into this dowel pin, knock in a 6x65 dowel pin, with the slit facing in the direction of travel (Figure 6).

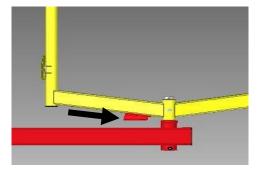

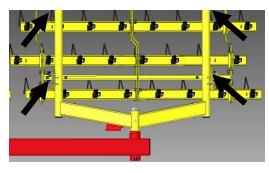

Figure 7 Figure 3

- Install the welded assembly KG12 instead of the previously removed pivoting limiter using the M12x110 bolts and M12 nuts as well as one M12 washer each (Figure 7).
- On the newly installed tine section fork, install another welded assembly KG12 with the M12x110 bolts and M12 nuts as well as one M12 washer each (Figure 8).

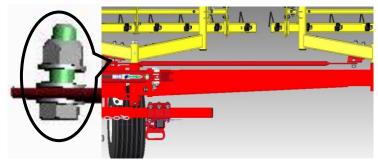

Figure 9

Figure 10

- Install the new tine sections on the tine section fork with the four chains and secure them with cotter pins (Figure 9).
- Between the centre frame and the first side tine section fork, install a folding linkage with the M14x45 bolts and M14 nuts as well as 3 M14 washers. The bolts are tightened firmly enough so that the linkage can still move (Figure 10).

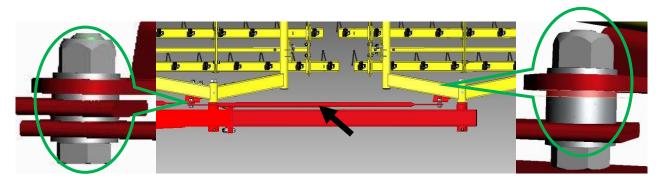

Figure 11

- Install another folding linkage for the outer tine section with the M14x45 bolts and M14 nuts as well as 4 M14 washers (Figure 11).
- On the outer tine section, fasten the folding linkage with the M14x45 bolts and M14 nuts as well as 7 M14 washers. The bolts are tightened firmly enough so that the linkage can still move (Figure 11).
- The AS 600 stickers are replaced with the AS 900 stickers.
- All of the extension steps performed until now must be repeated symmetrically on the other side.

2.2 EXTENSION WITH FEELER WHEELS

 The conversion from AS 600 to AS 900 with feeler wheels is performed at the beginning as described in Chapter 2.1 Extension without feeler wheels.

Figure 12

- The bracket for the feeler wheels is installed on the frame with the M12x35 bolts and M12 nuts as well as 1 M12 washer each (Figure 12).
- Proceed in the same way on the other side of the implement.
